Reproduction Services in Special Collections and Archives

Last updated November 2014

Materials housed in Special Collections and Archives at James Branch Cabell Library and Tompkins-McCaw Library for the Health Sciences may be reproduced for research or reference purposes provided that a) the physical condition of the material will allow its duplication without harm; b) duplication of the materials is not in violation of copyright law; and c) reproduction of the material does not violate donor agreements.

No reproduced materials may be used for publication, public display or incorporated into any electronic storage and retrieval system including posting on the Web without written permission of the VCU Libraries. Reproduced materials are not to be added to the holdings of another repository.

Electronic devices may be used in the Special Collections Reading Rooms. The use of flash is prohibited.

Self-service photocopying is allowed for certain materials in Special Collections and Archives. All other materials will be copied by Special Collections and Archives staff.

Fees for reproduction services are set by the VCU Libraries. VCU offices that transfer archival records to Special Collections and Archives may request reproductions from these materials at no charge.

Researchers should acknowledge VCU Libraries, Special Collections and Archives as source of reproduced materials

COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material.

Under certain conditions specified in the law, libraries and archives are authorized to furnish, or permit to be made, a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be “used for any purpose other than private study, scholarship, or research.” If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of “fair use,” that user may be liable for copyright infringement.
